About this proposal

This document sets out the complete scope, capability, commercial terms and support commitments for deploying Mero Attendance in your organization. Pricing on page 24 is an annual subscription and includes cloud hosting, all software updates and technical support.

About Wake and Tech Nepal Pvt. Ltd.

A Nepal-based software company building practical business systems.

Wake and Tech Nepal Pvt. Ltd. is a Kathmandu-based software company that designs, builds and supports business software for organizations across Nepal — schools, colleges, offices, factories, hospitals, cooperatives and NGOs that need systems built around how work is actually done here: the Bikram Sambat calendar, PF, SSF and TDS, and intermittent connectivity.

Rather than reselling foreign software that does not fit local practice, we build and maintain our own products — the people who wrote the code are the same people who answer your support call.

What We Do

HRMS

Complete human resource management from onboarding to exit.

Attendance Systems

Biometric, QR, GPS, WiFi and facial recognition attendance.

School ERP

Students, exams, results, fees and parent access.

Payroll

Automated salary processing with PF, SSF, TDS and payslips.

GPS Tracking

Live location, field visits and route history for mobile teams.

Mobile Apps

Android and iOS applications for staff, students and managers.

Custom Software

Bespoke systems built to an organization's own workflow.

Web Development

Corporate websites, portals and web applications.

Cloud Solutions

Hosting, backup, migration and infrastructure.

Our Mission

To replace paperwork and guesswork with software that any organization in Nepal can afford, understand and rely on — freeing administrators to spend their time on people rather than registers.

Our Vision

To become Nepal's most trusted platform for workforce and institution management, recognised for products that keep working long after the sale and for support that treats every customer as a partner.

Why Choose Us

- ✓ Built in Nepal, for Nepali organizations
- ✓ Full Bikram Sambat (BS) calendar support
- ✓ Local payroll compliance — PF, SSF, TDS
- ✓ Direct support from the development team
- ✓ Free installation, setup and staff training
- ✓ Three custom features free after purchase

About Mero Attendance

One cloud platform for attendance, HR, payroll and institution management.

Mero Attendance is an all-in-one, cloud-based attendance and human resource management platform. It records attendance through whichever method suits your organization — biometric device, QR code, GPS, WiFi, facial recognition or manual entry — and carries that data straight through to leave balances, payroll, reports and management dashboards without any re-keying.

Because it is cloud-based, there is no server to buy and no software to install on each machine. Administrators work from any browser; staff and students use the mobile app or any phone browser. Every organization's data is fully isolated, and access is controlled by granular role-based permissions.

7+ATTENDANCE
METHODS**25+**

MODULES

100%

CLOUD HOSTED

BS/AD

DUAL CALENDAR

Built For Every Kind of Organization

Offices

Shift and field staff, payroll, approvals.

Schools

Students, teachers, exams and fee collection.

Colleges

Semester attendance and assessment.

Institutes

Batches, trainers and certification.

Factories

Shift rosters, overtime and gate pass.

NGOs

Field teams and donor-ready reporting.

Hospitals

24-hour rosters and duty records.

Cooperatives

Members, staff, finance and billing.

Retail Stores

Multi-branch staff and stock oversight.

Why Mero Attendance

What changes for your organization on day one.

Paperless

Registers, muster rolls and spreadsheets are replaced by a single source of truth that cannot be back-filled from memory at the end of the week.

Real-time Attendance

See who is present, absent or late the moment it happens — not the following morning.

Mobile Attendance

Staff mark attendance from their own phone using QR, GPS or a selfie, with no hardware to buy.

Payroll Automation

Salary sheets build themselves from attendance, including overtime, deductions, PF, SSF and TDS.

Leave Management

Applications, approvals and balances handled in the system, so entitlement is never disputed.

Reports

Daily, monthly, late, absent and payroll reports exportable to Excel, CSV or PDF in one click.

GPS Tracking

Know where field teams are during working hours, with a location trail behind every visit.

Biometric Integration

Works with the ZKTeco and Hikvision devices you may already own.

QR Attendance

Dynamic QR codes let a whole class or shift check in within seconds, with no app install.

Student Attendance

Class, subject and course-wise records, with same-day visibility for parents.

Secure Cloud Backup

Your data is stored on managed cloud infrastructure with automated backups. Nothing depends on one office computer that can be lost, stolen or corrupted — and each organization's records are strictly isolated from every other tenant on the platform.

Core Features Overview

Ten pillars of the platform. Each is detailed in the pages that follow.

Attendance

Seven capture methods — biometric, QR, GPS, WiFi, face, selfie and manual — feeding one unified record.

HRMS

Employee records, departments, branches, documents, roles and the full joining-to-exit lifecycle.

Payroll

Salary structures, allowances, overtime, PF, SSF, TDS, loans and one-click bulk payslips.

Leave

Configurable leave types, approval chains, live balances and a shared holiday calendar.

Shift

Multiple, split and rotating shifts with grace periods, late detection and weekend rules.

Reports

Daily, monthly, late, absent, gap and payroll reporting with Excel, CSV and PDF export.

Mobile App

Android and iOS apps for employees, students and managers, plus an installable web app.

Dashboard

Live KPIs, charts and alerts so management sees the state of the organization at a glance.

Notifications

Email and in-app notices for leave, payslips, results, bills and organization announcements.

Biometric

ZKTeco and Hikvision device sync — automatic, real-time, over LAN or cloud.

Attendance Module

The core of the platform — capture, validate and report every working day.

Attendance can be captured by whichever method fits each group of people, and all methods write to the same record. A factory can use biometric devices at the gate while its field sales team checks in by GPS and the office uses QR — with one consolidated report at month end.

Live Attendance

Real-time board of who is in, out or late right now.

QR Attendance

Dynamic QR scanned from any phone browser.

GPS Attendance

Check-in validated against an allowed radius.

WiFi Attendance

Auto-marks on connecting to office WiFi.

Selfie Attendance

Photo captured at check-in for visual proof.

Face Attendance

Contactless facial recognition, browser-based.

Complete Feature List

✓ Live Attendance

✓ QR Attendance

✓ GPS Attendance

✓ WiFi Attendance

✓ Selfie Attendance

✓ Face Attendance Ready

✓ Manual Attendance

✓ Shift Attendance

✓ Late Report

✓ Early Leave

✓ Overtime

✓ Break Time

✓ Multiple Shift

✓ Holiday Calendar

✓ Weekend Rules

✓ Attendance Adjustment

✓ Attendance Approval

✓ Bulk Attendance

✓ Device Sync

✓ Daily Report

✓ Monthly Report

HRMS Module

Every employee record, document and workflow in one place.

The HRMS module holds the organizational structure — branches, departments and designations — and the complete record of every person within it, from the day they join to the day they leave. Documents, assets, complaints and letters are all attached to the employee profile rather than scattered across drawers and inboxes.

People & Structure

- ✓ Employee Management
- ✓ Departments
- ✓ Branches
- ✓ Designation
- ✓ Employment History
- ✓ Employee Profile
- ✓ Staff Login
- ✓ Role Permission
- ✓ Asset Assignment

Documents & Workflow

- ✓ Documents
- ✓ Complaints
- ✓ Tasks
- ✓ Announcements
- ✓ ID Card Generator
- ✓ Joining Letter
- ✓ Experience Letter
- ✓ Resignation Workflow

Granular Role Permissions

Every staff member sees only what their role allows. Permissions are set per module and per action — view, add, edit, delete, export — so a branch manager, an accountant and a teacher each get a portal shaped to their responsibilities without exposing anyone else's data.

The Employee Lifecycle

STAGE	WHAT THE SYSTEM HANDLES
Joining	Profile, documents, joining letter and portal credentials emailed automatically.
Active service	Attendance, leave, payroll, assets held, tasks, complaints and announcements.
Movement	Transfer, promotion and designation change, with full history retained.
Exit	Resignation workflow, clearance, asset return, final settlement, experience letter.
Archive	The record is kept, not deleted — past payslips stay auditable.

Leave Module

Policy encoded once, applied consistently, disputed never.

Leave types, annual allocations and whether each is paid are configured once for the organization. From then on, balances calculate themselves, applications route to the right approver, and both staff and management can see exactly what remains at any moment.

Annual Leave

Yearly entitlement with automatic balance tracking.

Sick Leave

Separate allocation with its own approval rules.

Casual Leave

Short-notice absence within a defined quota.

Maternity Leave

Extended statutory leave handled as its own type.

Custom Leave

Define any additional type your policy requires.

Half & Short Leave

Half-day, late-in and early-out requests.

Feature List

✓ Annual Leave

✓ Sick Leave

✓ Casual Leave

✓ Maternity Leave

✓ Custom Leave Types

✓ Leave Approval Workflow

✓ Leave Balance Tracking

✓ Holiday Calendar

✓ Leave Reports

✓ Leave Notifications

Connected to Payroll

Approved paid leave is treated as a working day by payroll; unpaid leave is deducted automatically. There is no separate reconciliation step at month end because both modules read the same records.

Payroll Module

From attendance to payslip without a spreadsheet in between.

Payroll draws directly on attendance, leave, overtime and any adjustments recorded during the month. Salary sheets for the whole organization are produced in a single run, and every figure can be traced back to the days that produced it.

Complete Feature List

✓ Salary Structure	✓ SSF — Social Security Fund	✓ Payslip Generation
✓ Allowances	✓ PF — Provident Fund	✓ Bulk Payslip for All Staff
✓ Bonus	✓ TDS — Tax Deducted at Source	✓ Payslip Email Delivery
✓ Overtime	✓ Loan & Installments	✓ Payroll Report
✓ Advance Salary	✓ Other Deductions	✓ Payroll History
		✓ Draft, Finalize & Paid

Nepal Payroll Compliance

PF, SSF and TDS percentages are configurable per organization and applied automatically to every payslip. Payroll periods can be run on either the Bikram Sambat or Gregorian calendar to match how your accounts are kept.

What Appears on a Payslip

LINE	HOW IT IS DERIVED
Basic Salary	From the employee's salary structure, pro-rated for days worked.
Overtime	Approved OT hours × hourly rate × the configured multiplier.
Bonus & Allowances	Festival, performance and fixed heads per employee or grade.
Unpaid Leave	Deducted automatically from the leave records.
PF / SSF / TDS	Statutory deductions at your configured rates and slabs.
Advance / Loan	The current instalment, against the outstanding balance.
Net Payable	Total earnings less total deductions, with the figure in words.

Biometric Integration

Keep the hardware you already own.

Mero Attendance connects to the biometric devices most commonly deployed in Nepal. Fingerprint and face terminals you already own can continue to be used — records are pulled into the cloud automatically and appear alongside every other attendance method.

ZKTeco

Fingerprint, card and face terminals. Attendance is synchronised through the Mero Attendance Puller application running on any Windows machine on the same network.

Hikvision

Face recognition terminals and access-control devices. Records are pulled directly from the device and mapped to the matching employee profile.

Integration Features

- | | |
|------------------|---------------------------|
| ✓ Auto Sync | ✓ Device Management |
| ✓ Real-time Sync | ✓ Employee Sync to Device |
| ✓ LAN Sync | ✓ Attendance Pull |
| ✓ Cloud Ready | ✓ Attendance Push (ADMS) |

Resilient to Connection Loss

Devices queue records locally when the internet drops and sync automatically once the connection returns, so a brief outage never costs you a day's attendance data.

Deployment Options

Puller Application

A Windows utility on your LAN pulls records from the device to the cloud.

Direct Push (ADMS)

Supported devices post attendance straight to the server, no local machine.

Multiple Branches

Any number of devices across any number of sites, one consolidated record.

GPS Tracking Module

Visibility for field teams, without micromanagement.

For sales representatives, field officers, delivery staff and site engineers, GPS tracking provides proof of visit and a clear picture of the working day. Tracking is enabled per person rather than switched on for everyone by default.

Live Tracking

See the current position of field staff during working hours on a single map.

Field Visit

Check in at a client site with GPS proof, linked to the client record.

Travel History

Replay where a staff member went on any past date.

Route Tracking

The full path taken between visits, timestamped throughout.

Geo Fence

Define allowed zones; check-in outside the radius is flagged or blocked.

Distance Calculation

Total distance travelled per day for travel allowance claims.

Feature List

- | | |
|-----------------------|------------------------|
| ✓ Live Tracking | ✓ Geo Fence Zones |
| ✓ Field Visit Records | ✓ Location History |
| ✓ Travel History | ✓ Distance Calculation |
| ✓ Route Tracking | ✓ Map View |

Who Uses It

Sales Teams

Client visits logged with location and time, feeding the CRM record.

Service Engineers

Site attendance where there is no biometric device to punch on.

Delivery Staff

Route and distance records supporting travel allowance claims.

Enabled per person, only during working hours

Tracking is switched on for individual staff rather than the whole organization, and only within their defined shift window.

Task Management

Turn instructions into tracked, accountable work.

Tasks can be assigned to individuals or teams, repeated on a schedule, and required to carry proof of completion. Managers see at a glance what is pending, overdue or waiting on their approval.

Create Tasks

One-off, daily, weekly or monthly recurring tasks.

Assign Tasks

To one person or a group, across branches.

Task Status

Pending, in progress, completed, overdue or missed.

Priority

Low, medium, high and urgent classification.

Deadline

Due date and time with automatic overdue flagging.

Reports

Completion rates by person, team and period.

Proof and Approval

Tasks can require an attachment or completion note, and be routed for manager approval before they count as done — useful for compliance checks, maintenance rounds and site inspections.

Typical Uses

ORGANIZATION	EXAMPLE
Office	Daily sales follow-ups, monthly reporting deadlines, client deliverables.
School	Lesson-plan submission, exam paper preparation, result entry deadlines.
Factory	Shift handover checks, machine maintenance rounds, safety inspections.
Field Teams	Assigned client visits with GPS check-in and a completion photo.

Finance Module

Day-to-day money in and money out, categorised and reportable.

The finance module records every income and expense against a category, payment method and reference number, giving management an accurate running picture of organizational cash flow without waiting for the accountant's monthly summary.

Income

Record and categorise all receipts.

Expense

Track spending against defined heads.

Voucher

Reference-numbered entries with attachments.

Cash Book

Chronological record of all transactions.

Ledger

Category and party-wise account view.

Reports

Period summaries with export to Excel.

Automatically Linked

Salary payments from payroll and fee collections from billing post into finance on their own, so the ledger reflects reality without anyone typing the same figure twice.

Typical Categories

TYPE	EXAMPLES
Income	Student fees, client payments, service charges, rent received, grants and donations.
Salary	Monthly payroll, bonus, overtime and final settlements, posted from the payroll module.
Operations	Rent, electricity, water, internet, telephone, fuel and vehicle maintenance.
Supplies	Stationery, consumables, equipment purchase and repairs.
Statutory	PF, SSF and tax remittances, registration and renewal fees.
Other	Any additional heads you define, with your own naming.

Every entry is attributable

Each transaction carries the date, category, payment method, reference number, an attachment and the user who recorded it — and can be filtered by branch.

Billing Module

Raise, send, and chase payment — with a clear due position at all times.

Billing covers student fees for schools and colleges, and client invoicing for offices and service businesses. Invoices can be generated individually or in bulk for a whole class or customer list, then emailed with a PDF attached.

Invoice

Itemised bills with discounts, scholarships and fines.

Estimate

Quotations that convert to invoices once accepted.

Payment

Full or partial receipts with automatic status update.

Due Report

Outstanding balances by person, class or period.

Customer Ledger

Complete billing and payment history per party.

Bulk Generation

Monthly fees raised for an entire class in one action.

Guardian Notifications

For schools and colleges, bills and receipts are emailed to both the student and their guardian with a PDF attached, and every send is logged so you can prove a bill was delivered.

Billing Workflow

STEP	WHAT HAPPENS
1. Raise	Generate a single invoice or bulk-generate for a whole class, batch or customer list.
2. Deliver	Email the invoice with a PDF attached; every send is recorded in the email log.
3. Collect	Record full or partial payment; status updates and a receipt is issued automatically.
4. Follow up	Due reports show exactly who still owes what, by person, class or period.

Stock Management

Know what you hold, what it cost, and when to reorder.

Stock management tracks items through purchase, issue, damage and adjustment, with low-stock thresholds that surface on the dashboard before you run out. Suitable for school supplies, office consumables, factory materials and retail inventory alike.

Stock Items

Catalogue with SKU, unit and category.

Purchase

Inward entries with cost and supplier.

Sales / Issue

Outward movement to staff or customers.

Stock Adjustment

Corrections and damage write-offs with reasons.

Supplier

Vendor records linked to purchase history.

Warehouse

Branch and location-wise stock separation.

Reporting

✓ Current Stock Report

✓ Movement History

✓ Low Stock Alerts

✓ Purchase Cost Valuation

✓ Branch-wise Stock

✓ Export to Excel

Low-stock alerts on the dashboard

Each item carries a reorder threshold. When the quantity on hand falls below it, the item appears on the dashboard as an alert — so shortages are noticed before they interrupt work.

Movement Types

MOVEMENT	RECORDED AGAINST
Purchase in	Supplier, invoice reference, unit cost and receiving branch.
Issue out	The staff member, department or class the item was issued to.
Sale	Customer, quantity and rate, linked to billing where used.
Transfer	Between branches or warehouses, with both sides updated.
Damage / Adjustment	Write-offs and physical-count corrections, with reason and approver.

Office Package

For corporate offices, agencies, cooperatives and service businesses.

The Office package is built around a salaried workforce: daily attendance feeding automated monthly payroll, leave with proper approval chains, and oversight of field staff and clients.

Attendance

Biometric, QR, GPS, WiFi and face capture with shift rules and overtime.

Payroll

Automated salary with PF, SSF, TDS, loans, advances and bulk payslips.

Leave

Configurable types, approval workflow and live balances.

HRMS

Employee records, documents, roles, assets and resignation workflow.

GPS

Live tracking, field visits, route history and geo-fencing.

Task

Assignment, priority, deadlines and completion reporting.

Finance

Income, expense, vouchers, cash book and ledger.

Billing

Client invoicing, payments, due reports and ledgers.

Reports

Attendance, payroll, leave and finance reporting with export.

Biometric

ZKTeco and Hikvision device integration and sync.

Also included

Client / CRM management, stock control, notice board, ID card generation, timesheets, appointment booking, form builder and the full mobile application.

School Package

For schools and secondary institutions.

The School package adds a complete academic layer on top of staff attendance and payroll — students, classes, sections, subjects, examinations, results and fee collection, with parents kept informed automatically.

Student Attendance

Daily roll call by class and section, in seconds rather than minutes.

Teacher Attendance

Staff attendance with shifts, leave and payroll integration.

Class Attendance

Class-wise registers with day and period tracking.

Subject Attendance

Per-subject records for senior classes.

Result Management

Marks entry, grading, ranking and printable marksheets.

Exam

Terminal exams with routines, full and pass marks per subject.

Fee Tracking

Monthly fees, discounts, scholarships, fines and dues.

Parents Login

Guardians see attendance, results and bills for their child.

Timetable

Class and teacher schedules with period allocation.

Notice

Announcements targeted to a class, section or the whole school.

Results & Bills Straight to Parents

When results are published or fees raised, the student and their guardian both receive an email with a PDF marksheet or invoice attached — no printing, no distribution, no disputes about whether it was received.

Institute Package

For colleges, training institutes, academies and consultancies.

The Institute package is organised around courses and batches rather than fixed classes, making it suited to semester programmes, short courses and professional training where attendance is tracked per course and certification is the outcome.

Course Management

Courses with codes, credit hours, assigned trainers and enrolled students.

Batch

Semester or intake-based grouping with its own schedule and roster.

Trainer

Trainer profiles, course allocation, teaching log and attendance.

Student Attendance

Course and semester-wise attendance with eligibility percentages.

Certificates

Completion certificates issued against finished courses.

Assignments

Task-based coursework with submission and review.

Results

Internal assessment and final examination marks with grading.

Payments

Course fees, installments, receipts and outstanding dues.

Attendance Eligibility

Institutes commonly require a minimum attendance percentage before a student may sit the final examination. The system calculates this per course and flags students below the threshold well before exam entry closes.

Industry Package

For factories, manufacturing units, warehouses and production facilities.

The Industry package handles a shift-based workforce at scale — rotating rosters, night shifts, heavy overtime and gate-level access control, with payroll that reflects exactly what was worked.

Factory Attendance

High-volume gate attendance through biometric or RFID terminals.

Shift

Morning, evening, night, split and rotating shift patterns.

Machine Operators

Operator assignment and skill-based grouping.

Production Staff

Department and line-wise headcount and presence.

Payroll

Daily, hourly, weekly or monthly wage calculation.

Overtime

Automatic OT hours with configurable rate multipliers.

Gate Pass

Authorised entry and exit records outside shift hours.

Biometric

Multiple terminals across gates, synced to one record.

Built for Wage Variety

Not every worker is on a monthly salary. Mero Attendance supports hourly, daily, weekly and monthly wage bases side by side in the same organization, each calculated correctly from the same attendance data.

Package Comparison

Every package runs on the same platform — only the enabled modules differ.

MODULE	OFFICE	SCHOOL	INSTITUTE	INDUSTRY

Modules are switchable

Package contents are a starting point, not a restriction. Any module can be enabled or disabled for your organization at any time — a settings change, not a new purchase.

Mobile Application

The whole system in the pocket of everyone who needs it.

Mero Attendance ships with a mobile application for Android and iOS, plus an installable web app that works from any browser. Each user sees only what their role allows — a staff member marks attendance and checks a payslip, a manager approves leave, an owner sees the whole organization.

Employee App

Attendance, leave, payslip and notices.

Student App

Attendance, results, routine and fees.

Manager App

Approvals, team presence and tasks.

Owner Dashboard

Full organization overview, anywhere.

In-App Capabilities

✓ GPS Attendance & Field Visit

✓ QR Code Attendance

✓ Selfie & Face Attendance

✓ Leave Apply & Track Status

✓ Payslip View & Download

✓ Push Notifications

✓ Notice Board

✓ Attendance History & Summary

Also installs as a desktop app

The web dashboard can be installed directly from the browser onto Windows, macOS and Android as a standalone application — no app store required, and it keeps working through short internet interruptions.

Platform Support

PLATFORM	HOW IT IS OBTAINED	BEST SUITED TO
Android	Google Play Store	Staff and students, day-to-day use.
iOS	Apple App Store	Staff and students on iPhone.
Web browser	Any browser, no install	Administrators and office use.
Desktop app	Installed from the browser	Reception and front-desk machines.

Role-aware by design

There is one application, not four. What each person sees is determined by their role and the permissions granted to them, so there is nothing extra to install or configure when someone is promoted or moves department.

Dashboard & Reports

Decisions need numbers, not the promise of numbers next week.

The dashboard opens on today: who is present, late, absent, on leave, and what needs approval. Beneath it sit charts showing the trend over weeks and months, so patterns become visible long before they become problems.

Charts & Analytics

Attendance Graph

Daily and monthly presence trend across the organization.

Payroll Graph

Salary cost by month, department and branch.

Employee Growth

Joining and exit trend over the year.

Standard Reports

✓ Daily Attendance Report

✓ Monthly Attendance Report

✓ Late Arrival Report

✓ Absent Report

✓ Early Leave Report

✓ Overtime Report

✓ Leave Report & Balance

✓ Payroll & Payslip Report

✓ Department / Branch Summary

✓ Individual Staff Report

Every report exports

All reports can be filtered by date range, branch, department or individual, and exported to Excel or PDF for board packs, audits and government submissions.

Getting Reports to the Right People

METHOD	DETAIL
On screen	Filter and read directly in the dashboard, on desktop or mobile.
Excel export	Full data export for your own analysis or onward submission.
PDF export	Print-ready, branded with your organization's name and logo.
Email delivery	Payslips, results and bills sent directly to staff, students and guardians.
Role-based access	Branch managers see their own branch; head office sees everything.

Pricing

One annual subscription. No per-module charges, no hidden extras.

Pricing is based only on the number of members in your organization. Every package includes the complete feature set for your chosen type — nothing is held back for a higher tier.

MEMBER LIMIT	ANNUAL PRICE (NPR)	NOTES
Up to 25 Members	Rs. 5,000	Small teams & startups
Up to 50 Members	Rs. 8,000	Growing offices
Up to 100 Members	Rs. 10,000	Schools & mid-size firms
Up to 150 Members	Rs. 12,000	Multi-branch organizations
Up to 250 Members	Rs. 15,000	Large institutions
Up to 500 Members	Rs. 20,000	Colleges & factories
Unlimited Members	Rs. 25,000	★ BEST VALUE

Included in Every Package

Cloud Hosting

Server, storage, SSL and daily backups — all included, nothing to buy separately.

Software Updates

Every new feature and improvement released during your subscription, at no extra cost.

Technical Support

Phone, email and remote support throughout the subscription period.

What the price does not change with

The number of branches, departments, biometric devices, admin users or reports you run has no effect on the price. Only the member count matters, and you can upgrade tier at any time by paying the difference for the remainder of the year.

All prices are in Nepalese Rupees and exclusive of VAT. Prices are valid for 90 days from the date of this proposal.

Customization Policy

Future Feature Development Policy

No two organizations work identically. We do not expect you to change how you operate to suit the software — so every customer receives free development capacity to shape the system around their own process.

Three Custom Features — Free of Cost

Available to every organization after purchasing the software.

03

FREE CUSTOM FEATURES

Every organization may request up to **THREE (3) custom features free of cost** after purchasing the software. These are developed by our own team, tested, and delivered into your live system.

Conditions

- ✓ Features must be practical and within the existing system architecture.
- ✓ Free customizations are available only once per organization.
- ✓ After three free custom features, any additional feature requests will be quoted separately based on complexity.
- ✓ Pricing depends on development hours and project scope.
- ✓ Customers will receive a quotation before development begins.
- ✓ Approved custom features become part of the customer's system.

How a request works

You describe what you need in writing. We confirm whether it falls within the free allowance, agree the scope and a delivery date, build it, and deploy it to your system after your confirmation — with no interruption to daily use.

Additional Development Charges

Indicative pricing for work beyond the three free features.

Once the free allowance is used, further development is quoted on scope. The ranges below are indicative, to help you plan a budget — the exact figure is always confirmed in writing before any work begins.

CATEGORY	TYPICAL SCOPE	INDICATIVE CHARGE (NPR)
Small Feature	A new report, an extra field, a modified calculation, a custom export format.	Rs. 5,000 – 10,000
Medium Feature	A new workflow with approval steps, a custom document or certificate design, an added screen with its own data.	Rs. 10,000 – 25,000
Large Module	A complete new module with its own records, permissions, reports and mobile support.	Rs. 25,000 – 75,000+
Enterprise Integration	Integration with external accounting, ERP, banking or government systems; dedicated infrastructure; on-premise deployment.	Quotation Required

What is included in a quote

Requirement analysis, development, testing, deployment to your live system, and training on the new feature — there is no separate charge for any of these.

Ongoing support

Custom features are covered by the same support and update commitment as the rest of the system, at no additional annual cost.

No work starts without your approval

Development begins only after you have received, reviewed and confirmed a written quotation stating the scope, cost and delivery timeline.

Quotation

To be completed and signed by both parties.

Customer Signature & Organization Seal

Support & Onboarding

Software is only useful if your team can actually use it.

Every subscription includes full onboarding and ongoing support. We set the system up, train your team, and stay available afterwards — all within the annual price, with no support contract to negotiate separately.

Free Installation & Setup

Organization configuration, branches, departments, shifts, leave policy, payroll rules and staff import — done for you before go-live.

Training

Live sessions for administrators and staff, covering daily operation, month-end payroll and reporting.

Video Tutorials

A library of short guides covering each module, available any time for new team members.

Phone Support

Direct line to our support team during business hours:
9861397178.

Remote Support

Screen-sharing sessions to resolve device, configuration or usage issues directly.

Email Support

Written support and documentation requests at
info@wakeandtech.com.np.

Software Updates Included

New features, improvements and security updates are released to your system automatically throughout the subscription period. You are never asked to pay for a version upgrade.

SUPPORT CHANNEL	AVAILABILITY
Phone Support	Sunday – Friday, 10:00 AM – 6:00 PM
Email Support	All days — response within 24 hours
Remote / Screen Share	By appointment, Sunday – Friday
Critical Issue Response	Priority handling, same business day

Terms & Conditions

The commercial basis on which the service is provided.

1. Subscription

Mero Attendance is provided as an annual subscription service. It commences on the date the system is made available to the customer and remains valid for twelve (12) months. The applicable price is determined by the member limit selected at the time of purchase.

2. Renewal

The subscription is renewable annually. A renewal notice is issued thirty (30) days before expiry. Renewal pricing follows the tariff current at the time of renewal, and existing customers are given written notice of any price change before their renewal date.

3. Support

Installation, configuration, training, software updates and technical support are included in the subscription price throughout the subscription period, provided by phone, email and remote session during the stated business hours.

4. Payment Terms

The annual subscription fee is payable in advance. All prices are quoted in Nepalese Rupees and are exclusive of VAT, charged at the prevailing statutory rate. A tax invoice is issued upon receipt of payment, which may be made by bank transfer, cheque or digital wallet.

5. Data Ownership

All data entered into the system remains the sole property of the customer. Wake and Tech Nepal Pvt. Ltd. acts only as a data processor and will not sell, share or use customer data for any purpose other than operating the service. The customer may export their data at any time during the subscription period, and data is retained for thirty (30) days after expiry or cancellation.

6. Customization

Three (3) custom features are provided free of cost as set out on page 25 of this proposal. Additional development is subject to a separate written quotation, which must be approved by the customer before work commences.

7. Cancellation

The customer may cancel at any time by giving written notice. Fees already paid are non-refundable for the remainder of the current period, and the service remains available until that period ends. Wake and Tech Nepal Pvt. Ltd. may suspend the service for non-payment or for use breaching applicable law, after written notice.

8. Service Availability

The service is hosted on secure cloud infrastructure with daily automated backups. Scheduled maintenance is notified in advance and performed outside business hours where possible.

Thank You

We would be glad to arrange a live demonstration of Mero Attendance for your team, at your convenience.
